IoT Project: Height / capacity monitor

Tim Reiprich, Tegshigzugder Otgonbayar, Luca Maltagliati

January 14, 2020

- measure height using an ultrasonic sensor and send it to central computer
- show if certain thresholds (low/high) are surpassed at basket and central computer using LEDs and noe-red
- thresholds can be dynamically set using the Node-Red interface and are sent to the ESP connected to the sensor
-

add circuit here

Node-Red interface

add interface here (or points you want to say)

explain important functions of written cod

Limitation

- measurement fluctuations of the sensor $\rightarrow$ not reasonable values have to be filtered
- needs constant Wifi connection between central computer and ESP to recognize thresholds

Thanks for your attention!
